

# Phoenix FD for Maya

Installation Guide for Windows

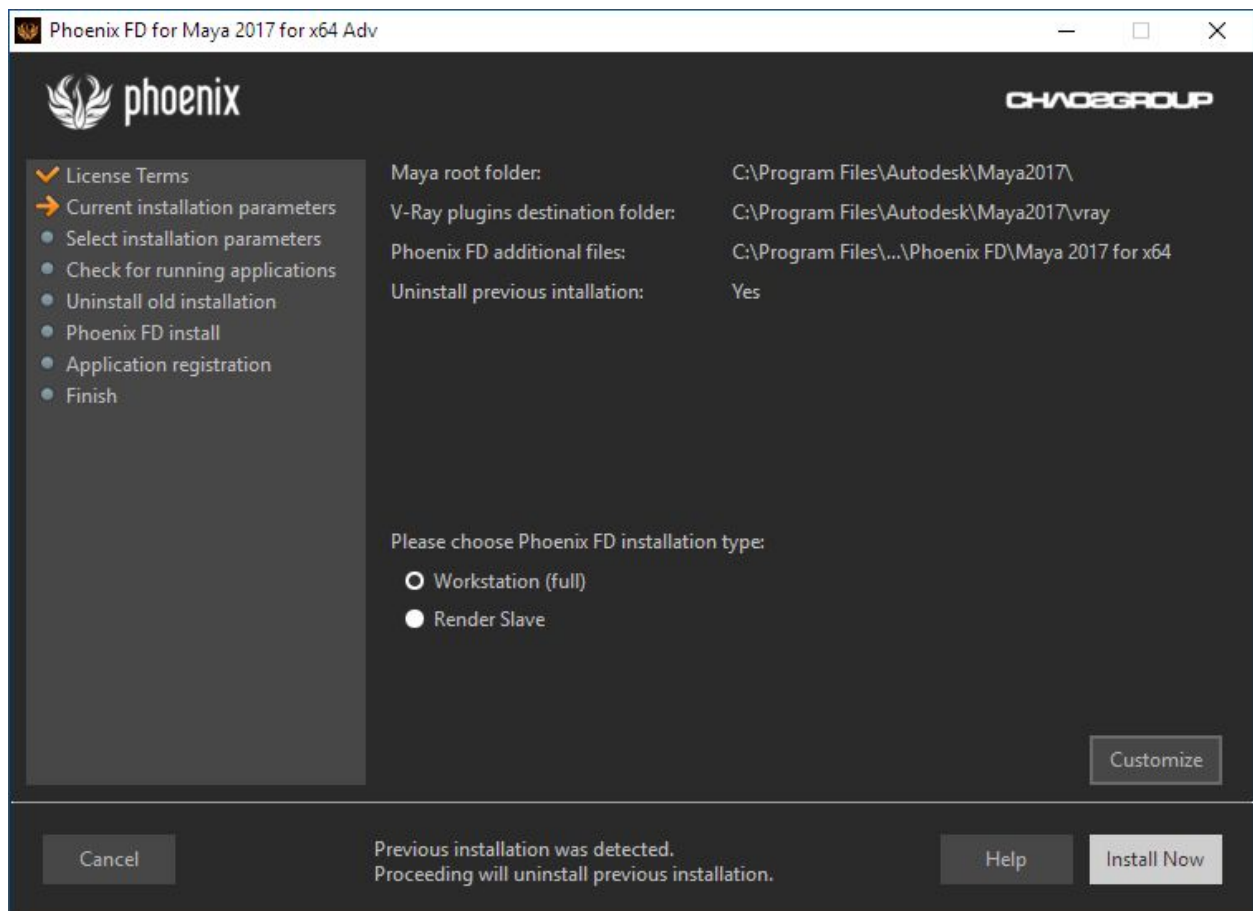

## Windows

Run the installer.

1. Upon the start of the installation, Windows may ask you for permission to run the installer with administrator privileges. Please confirm.
2. You will be presented with the Phoenix FD [licensing agreements](#). Please take a moment to review the agreements. Click the I Agree button to proceed:
3. During the next step, you can choose the installation type. The available installation types are:

**Workstation (full)** – This is a complete installation and includes all components necessary to use Phoenix FD. It includes Phoenix FD for Maya, the V-Ray RT render plugin.

**Render Slave** – This installation includes Phoenix FD for Maya and the V-Ray RT render plugin.

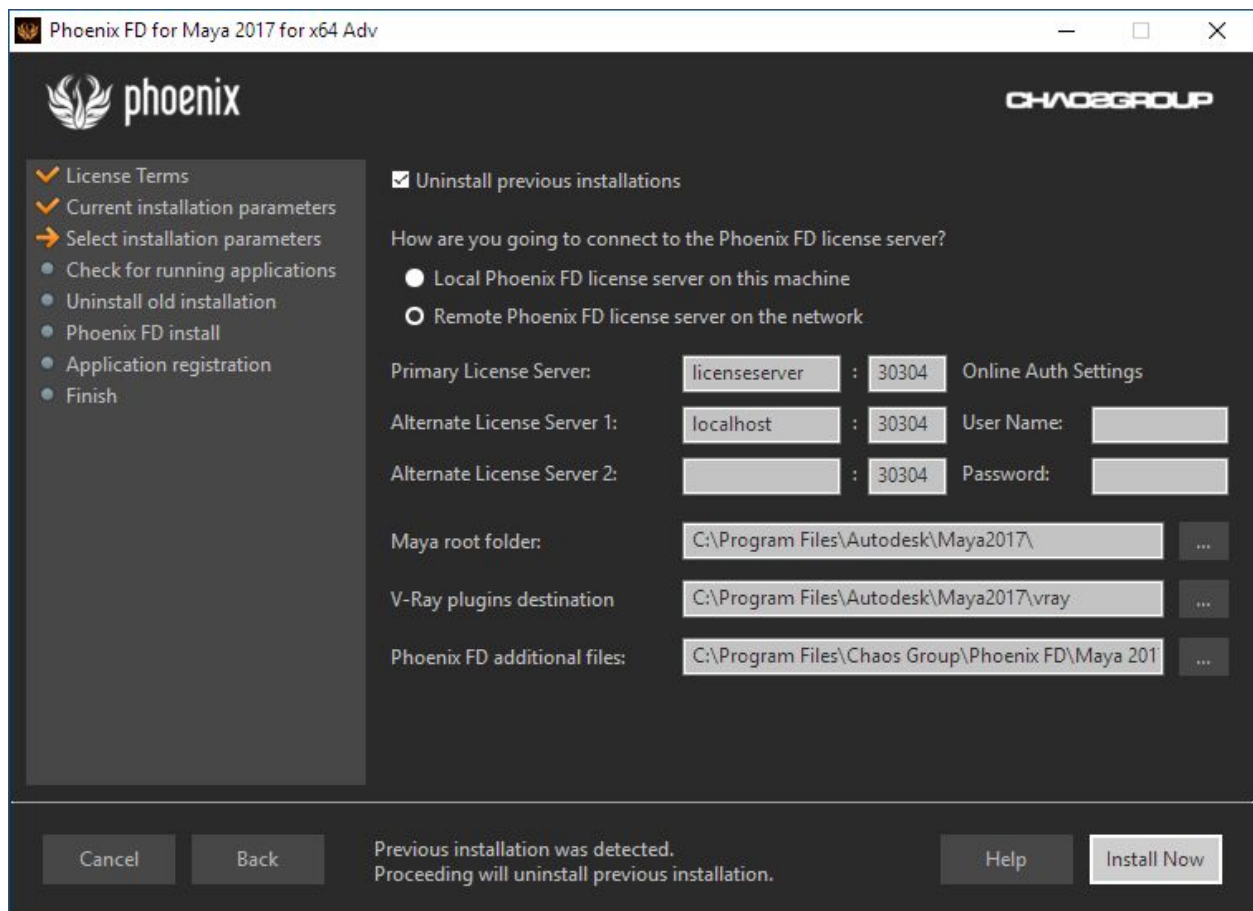

4. After you choose the installation type, you can click the Customize button and adjust the corresponding installation settings. If you have selected the Workstation installation, you will see the full list of customizable settings:

**Uninstall previous installations** – Leave this checked to automatically uninstall any previous versions.

**Phoenix FD License Server location** – If changed from **Local Phoenix FD license server** to **Remote Phoenix FD license server**, additional settings become available in the window to set the server name/location.

**Specify installation paths** – Please check if the default folders are correct. Common settings for Workstation installation for Maya 2017 with default paths should look like the screenshot below:

5. When ready, click the **Install Now** button.
